EDUCATION

Imperial College London

London, England

MEng Electrical and Electronic Engineering (Expected First Class)

Oct 2022 – Jun 2026

- **Relevant coursework:** Machine Learning, Deep Learning, Large Dimensional Data Processing, Probabilities and Statistics, Machine Intelligence for Finance, Optimisation

EXPERIENCE

Project Manager and Software Developer

London, England

Robots4ChildrenWithDisabilities - Imperial College

Apr 2025 – Jul 2025

- Robots4ChildrenWithDisabilities is a research initiative within Imperial's Personal Robotics Lab developing assistive robotic systems for paediatric use
- Led a team to build a predictive assistance robotic companion for children with motor disabilities
- Developed the software stack, including a modular UI and training and deploying an adaptive machine learning (ML) model which adjusted gameplay difficulty in real-time
- Integrated all control systems, including head tracking using OpenCV and MediaPipe
- Delivered the product pitch and demonstrations
- **Key skills:** Machine Learning, Python, Embeddings, App Development, UI Design

Data Intern

London, England

Pactio Technologies Limited

Sep 2024 – Oct 2024

- Pactio is a fintech startup building tools to automate financial and operational workflows
- Reviewed and analyzed 50 transaction proposals outlining corporate acquisitions
- Responsible for inputting and organizing data into a database, to train and evaluate an ML model
- Ensured accuracy and consistency to optimize predictive performance
- **Key skills:** Data Analysis, Transaction Analysis, Database Management

Private Equity Analyst and Software Engineering Intern

London, England

Gaman Succession

Jun 2024 – Sep 2024

- Gaman Succession is a search fund focused on acquiring and operating a software SME in Western Europe
- Developed 3 Python- and SQL-based, AI-driven applications to automate the extraction, processing, and retrieval of large datasets
- Trained ML models using Python to learn DCF-based valuation patterns, improving robustness and consistency of company valuation scoring
- Automated processing of 700K+ multi-column records using Python and SQL
- Improved team lead generation efficiency by 320%
- **Key skills:** Python, SQL, PyTorch, Pandas, Numpy, AI App Development, Communication Skills

Consultant

London, England

180 Degrees Consulting (180DC)

Dec 2023 – May 2024

- 180DC is a student-led consultancy providing strategy consulting for nonprofits
- Delivered a bilingual (English–French) consulting project for a nonprofit focused on improving financial literacy in France
- Led analytics-driven UX improvements, increased website visits by 85% & user retention by 49%
- Collaborated with stakeholders to translate business goals into measurable digital KPIs and experiments
- **Key skills:** Python, SQL, PyTorch, Pandas, Numpy, AI App Development, Communication Skills

HIGHLIGHTED PROJECTS

Autonomous Assistive Bimanual Robot

London, England

Master's Final Year Project

Sep 2025 – Present

- Designing and building a low-cost mobile robotic system to assist children with motor disabilities in activities of daily living such as eating and dressing
- Developed and deployed imitation learning and reinforcement learning models for autonomous task execution
- Building a human-in-the-loop control system to infer user intent from varying input signals and adapt behaviour
- Implemented an end-to-end ML pipeline from data collection and training to real-time inference
- Translated user needs into a practical assistive solution, working across technical and non-technical requirements

Neural Decoding Project

London, England

Machine Learning for Neuroscience

Sep 2025 – Dec 2025

- Developed a neural network model to map neural activity to movement predictions
- Implemented a training and evaluation pipeline in PyTorch, including loss optimisation and model validation
- Applied time-series preprocessing and feature engineering to structure and align input signals for model training
- Achieved 92% accuracy on test data (baseline 50%) through hyperparameter tuning and architecture adjustments

ML-Powered SME Target Sourcing Tool (Self-Initiated)

London, England

Gaman Succession

Jun 2024 – Aug 2024

- Designed and built a Python web scraping pipeline to automate the collection and structuring of data on European SMEs using SQL
- Developed a machine learning model to score and rank acquisition targets based on stakeholder-defined criteria
- Collaborated with non-technical stakeholders to translate investment requirements into data features and model inputs
- Delivered actionable insights to support deal sourcing

Optiver Trading Academy

London, England

Algorithmic Trading System Development

Sep 2023 – Jan 2024

- Developed a market making algorithm achieving 3rd place out of 100 participants in profitability
- Traded on options and cross-asset arbitrage opportunities between correlated instruments
- Generated additional profit with inventory- and delta-aware bid–ask quoting logic, dynamically adjusting trade sizes to adjust exposure based on personal confidence metrics
- Backtesting and optimizing the algorithm using PnL and delta tracking and tuning parameters

SKILLS

- **Languages:** Fluent in English, French (DALF C1), and German (C1)
- **Computer:** Adept at using Python, SQL, MATLAB, Swift, CSS, HTML, Microsoft Office 365

ADDITIONAL INFORMATION

- **Sport:** Imperial College Futsal
- **Interests:** Electronic music production, film score composition
- **Nationalities:** Swiss, Irish, British
